This e-mail newsletter contains every news story published on Continuity Central during the previous seven days.

ColoSpace, Inc., a provider of colocation, disaster recovery and managed services, has announced the opening of its newest facility, in Marlborough, Massachusetts.

This new data centre facility will allow businesses in the I-495/Route 9 Corridor, Worcester, MA, Providence, RI, and Hartford, CT, areas to conveniently locate their mission critical computer network servers in a secured off-site location while retaining electronic access 24 x 7.

ColoSpace currently operates two other facilities in Massachusetts and one in New Hampshire. All of the facilities are networked together to provide true redundancy and failsafe uptime.

"ColoSpace's goal is to provide New England companies with carrier class data centre space, first class technical support and managed services to ensure clients can resume business operations quickly and seamlessly in the event of an unforeseen disruption of power or communications services," said Wayne Sawchuk, president and CEO of ColoSpace. "Companies also require this highly reliable, quality service to off load peak development work which would otherwise impact critical day-to-day operations or to fulfil compliancy with regulations for data recovery, such as HIPPA in the medical industry, or SEC guidelines in the financial community."

All of ColoSpace's facilities boast multiple Tier One Internet Carriers, access to several major telecom and fibre providers, battery and generator backup power, fully redundant Liebert cooling systems, UPS (uninterruptible power supply), fire detection and control and 24 x 7 secure access.
